Homework 1

PHYS 600 Sep 8, 2023

Numerical Integration

```
In[111]:=
       f[\Omega_{-}, z_{-}] := \frac{1}{\left(\Omega (1+z)^{3} + (1-\Omega) (1+z)^{\frac{3}{2}}\right)^{\frac{1}{2}}};
In[112]:=
        integrateFunction[\Omega_?NumericQ, z0_?NumericQ] := NIntegrate[f[\Omega, z], {z, 0, z0}];
In[113]:=
        \OmegaValues = {0, 0.3, 0.7, 1};
In[114]:=
        (*Generate a plot for each \Omega*)
        plots = Table[
            Plot[
              integrateFunction[i, z0], {z0, 0, 1},
              PlotStyle → ColorData[97, "ColorList"][i],
              AxesLabel → {"z", "Integration Result"},
              Frame → True,
              FrameLabel → {{"Integration Result", None}, {"z", None}},
              LabelStyle → {FontSize → 14},
              PlotRange → All,
             PlotLegends → Placed[
                 \{ "\Omega = " \Leftrightarrow ToString[\Omega Values[i]] \}, \{0.7, 0.1 \}
            ], {i, Length[ΩValues]}
           ];
```

Analytic Integration

```
In[115]:=
\Omega = 0 :
\int_{0}^{z} \frac{1}{(1+z^{\prime})^{\frac{3}{4}}} dz^{\prime} = \int_{1}^{1+z} u^{-\frac{3}{4}} du = \boxed{4 (1+z)^{\frac{1}{4}} - 4}
```

In[115]:=
$$\Omega = 1:$$

$$\int_{0}^{z} \frac{1}{(1+z')^{\frac{3}{2}}} dz' = \int_{1}^{1+z} u^{-\frac{3}{2}} du = \boxed{2 - \frac{2}{(1+z)^{\frac{1}{2}}}}$$
